

CORPORATE VOICE SOLUTIONS NEXT GENERATION NETWORK (NGN)

NAYATEL PRI SERVICES

With high availability and reliability

Your business is growing and so are your telecommunications needs. With Nayatel's Primary Rate Interface (PRI) service, our all-in-one customized voice solution helps you manage growth more effectively. Using state-of-the-art optical fiber infrastructure and Next Generation Network (NGN), our PRI service provides virtually unlimited number of 'pairs' at your location which grow as your business grows. You need 30 lines or any multiple of 30 lines, we connect you in no time.

NTL provides Direct Inward Dialing (DID) facility through PRIs. This means that last four digits of your seven digit allocated phone number, i.e., 831 xxxx, could be programmed as extensions on your PABX. So if your local extension is 1111, NTL's PRI would program your DID as 831 1111. Callers from outside your office would dial 831 1111 to reach straight to your desk whereas internal office callers can call you by dialing your local extension as 1111. This eliminates the need of having separate numbering plans for your PABX extensions and your phone numbers.

Nayatel PRI installation activation is a hassle free process, with minimum possible installation time.

Here are few characteristics of Nayatel PRI services.

- ◆Crystal clear voice communication for your business.
- ◆Intelligent Call handling and management features.
- ◆Flexible DID numbers availability, with reserve capacity for future.
- ◆Compatible with wide range of PABX systems.
- ◆24*7 customer care with online tracking of the user queries.
- ◆Cost effective solution, with real time online billing information.
- ◆Competitive call tariff.
